

specifications

1. The system is available to suit 12-13mm, 17-19mm or 19-21mm panels. The fixings for 12-13mm are non-corrosive and ideal for wet changing or shower areas. Whereas, the fixings for the 17-19mm and 19-21mm are manufactured from mild steel and are bright zinc plated for maximum life in less aggressive environments
2. The raised headrail runs along the entire length of the cubicles and can either return to the wall in the event of a corner cubicle configuration or alternatively can be finished with a decorative end cap.
3. The headrail is supplied in 2 metre lengths; these can be cut on site to accommodate variations from initial survey.
4. The hardware can be supplied in a variety of finishes that include; Silver Satin Anodised, Polished Aluminium, Brushed Stainless Steel effect and Polyester Powder Coated in a selected range of colours.
5. A full range of mild steel or 'non-corrosive' aluminium bench seating provides the solution for all wet or dry seating areas.
6. Specially designed coat hooks and toilet roll holders are available to complete the system.
7. All hardware to support the system is available and requires no additional fixings.
8. A choice of hinges ensures the doors can be left or right hand hung, inward or outward opening and fall open or closed. Wrap around hinges are supplied as standard for 12-13mm and 19-21mm doors.
9. Essential fixing instructions are supplied to ensure the cubicles are manufactured to ALM specifications.
10. Floor fixings for partition supports are supplied for standard concrete floors.

- Fully 'Non-corrosive'
- Extensive colour selection
- Emergency door release mechanism
- Anti door slam and vibrations pads
- All hinges include fall closed, open or ajar cammed door hinges
- Suitable for disabled door configurations
- Installer friendly

The OLYMPIC range provides the specifier with the ultimate cubicle system. With a variety of unique design features, the system offers a fresh look to cubicle design. Suitable for all wet or dry environments the system presents the perfect solution for all public shower, changing and washroom developments.

The distinctive look is maintained throughout the cubicle with all hardware reflecting the unique streamlined design. A decorative raised headrail adds substantially to the aesthetic appeal of the system while increasing strength.

An extensive choice of panel materials includes: Compact Grade (CG), and high Pressure Laminate (HPL) ensuring the system is adaptable to each client's budget, while maintaining the distinctive look of the system.

Suitable for 12-13mm or 17-21mm panels, its adaptability means that the Olympic system can be specified in every area of a development and ensures uniformity is maintained throughout. Suitable for prestigious projects where superior design and flexibility are required Olympic offers the ultimate cubicle solution!

1 HEADRAIL

The attractive raised headrail possesses qualities of strength and stability combined with intricate design. The headrail is held in place by supports attached to the pilaster (or partition for shower cubicle). The support features the same ringed pattern that is engraved around the leg support to ensure continuity of design. The headrail is available with attractive end caps or alternatively, it can be returned to the wall.

2 FACE PLATE

The faceplate features a modern slim design that includes a visible, easy to use 'coin operated' external emergency release facility that is a must for public areas. With no visible fixings the faceplate attracts no attention from vandals or young and inquisitive children.

3 BRACKET

The simple and attractive angle brackets feature 'non-corrosive', discreet through fixings and uniquely designed blind T-nuts.

4 HINGES

The system come as standard with extremely strong Olympic wrap around hinges for 12-13mm and 19-21mm doors and pilasters. However, the system is available with a range of hinge designs to suit all projects and specifiers requirements, all include easily adjustable fall closed or open cammed door hinges.

5 INDICATOR BOLT MECHANISM

Designed specifically for continual use, this easy to use turn knob type indicator bolt incorporates non-corrosive stainless steel fixings to combat the humidity normally

associated with changing and washroom areas. The indicator bolt is also suitable for outward opening doors for disabled cubicle configurations.

6 PARTITION SUPPORT

The easy to install, strong support features a simple ringed pattern engraved around the face of the shroud. The decorative shroud conceals the 'non-corrosive' floor fixings, which are used to accommodate varying floor clearances that are common in changing and WC areas.

7 SHOWER CURTAINS

Essential quality commercial shower curtains are available to compliment the system and offer the complete solution for shower areas. Fully machine washable they are manufactured from extremely high quality Taffeta nylon.

8 BENCH SEATING

Colour matched mild steel or uniquely designed tubular aluminium bench seating is available; hook boards and compact grade seating elements ensure the system maintains a continuity of design throughout. The added benefit of the aluminium seating is that it completely eliminates the risk of corrosion associated with wet changing and shower areas.

PANEL SELECTION

Choosing from the Washroom collection of laminates it is possible to use compact grade, or high-pressure decorative laminate panels, which are both exceptionally strong and durable. Offering excellent resistance to vandalism the panels are suitable for all high or low use, wet or dry areas.
