

TALISMAN
EXCELSIOR

The Flexible Framed Cubicle System

The easy to install, flexible framed system

Talisman is the latest addition to the Excelsior cubicle range and as with all our products it's already a popular choice for installation around the UK.

Perfect for areas of high volume usage such as schools, leisure centres and arenas, its robust build quality is proven to meet everyday demands.

Talisman is supplied pre-drilled and part assembled allowing for ease of installation on any site. Security screws and fittings are supplied as standard. Its sleek clean lines and contemporary design mean no fixings are visible from the exterior of the cubicle when installed. The system offers outward opening disabled cubicles if required, along with rise and fall hinges and a choice of two indicator bolts - both incorporating an emergency coin release system and anti-finger trap. Full height cubicles can be constructed up to 3.5m with the facility to fix an overhead 'anti-peek' screen into the headrail if desired. Headrails are secured to the wall for extra rigidity and heavy duty door hooks allow for hanging of bags and coats - adding extra convenience for the end user.

Board material manufactured using 13mm Compact Grade Laminate. Available in Satin anodised and powder coated finishes as standard. Bespoke colours and finishes are available on request.

- Full installation details supplied
- Length sections can be supplied to suit individual board sizes
- Flexible width doors and various pilaster widths to cope with all situations
- Centre pilaster and corner posts are supplied with fitted adjustable height feet as standard
- Full privacy cubicles can be produced with slight modifications to the Talisman system
