

excelsior[®]

washrooms for all environments

CASE STUDY

Client: CEG

Contractor: TSK Group Ltd

Architect: SpaceInvader

Location: Altrincham

Completion Date: April 2018

Altrincham Business Park located in the South of Manchester has 85,000sq ft of developed office space.

The newly refurbished accommodation designed by SpaceInvader Architects was managed and delivered by TSK Group. The enviable location and contemporary working environment ensures this building will be occupied by very happy tenants.

Excelsior's Flush 30 Cubicle system was chosen and installed in the washrooms to stunning effect. The aluminium rebated framed door provides a contemporary element that is durable and robust.

The recent adaptation of this system to incorporate a rebated aluminium frame is justifiably proving extremely popular with both Architects and Specifiers.
