

The Project – Barr Beacon School

Refurbish and modernise the Science Block Classrooms. This latest refurbishment forms part of ongoing upgrades at the school.

The Headteacher knows exactly what she is looking for and favours high end boutique hotel style washrooms.

Having worked on previous phases of washroom renovations in the past for the school, Excelsior proved to be the go to fabricator for this latest upgrade.

The Challenge

Adapt Senator Cubicle Range to carry a screen-printed glass door ensuring appropriate hinges, indicator and keep are offered and suitable for use with the system.

Deliver an opulent system, generally not found in the education sector to surpass the student's expectations.

The Solution

The idea of merging our ranges was conceived by understanding the client's needs and the combination of our expertise in the washroom industry. The meeting with the client was conducted following excelsior's approach, which comprises, active listening, clear and concise communication, and willingness to embrace innovative ideas

To bring to life Barr Beacon Academy's vision, we installed a hybrid of our Senator and Optik range, complete with Extruded Aluminium Pilaster.

The project was completed to the clients' satisfaction, and the vision of an opulent boutique-style hotel feel has now become reality for workers and students at Barr Beacon Academy.

The headteacher commented that the high specification is well received by the students who treat the areas with deference and pride.
