washrooms for all environments

The Project – Dudley College

£12m investment into a new facility at Dudley College will enable the college to specialise in training people working in construction using brand new/state of the art apprentice standards.

On completion of the project, the college have pledged approx. half a million pounds sponsorship into Dudley Academies Trust which will benefit a number of local schools and enable the sharing of resources and expertise.

The Challenge

Deliver a package that will inspire the students and present a true representation of the quality and standards expected in the construction industry.

Install a full height, flush frontage cubicles system in a warehouse style space with ceiling heights exceeding four meters.

Use local trades and services to the Black Country.

Offer non-standard products to class-room areas.

The Solution

Excelsior Flush 30 Full Height Cubicles installed on 150mm leg with upgraded stainless steel fittings.

Complementary Duct panelling installed to house cisterns and associated plumbing work.

Manufacture and install Solid Grade Laminate workstations in the classrooms.
